WHY STAINLESS STEEL WINS

PLASTIC LEAKS. GLASS BREAKS. STEEL SEALS.

	PLASTIC TUBES	GLASS TUBES	ALASSY STAINLESS STEEL
SEAL & FRESHNESS	Leaks at just **−10 kPa** in vacuum testing — and the thin walls keep breathing. Aroma and potency fade fast.	Only as good as the cap — cork and push-fit caps are the leak point.	**Holds to −35 kPa — 3.5× the seal of a plastic tube. No air exchange; freshness stays locked in.**
LIGHT PROTECTION	Translucent walls let light straight through to the product.	Fully transparent. Light ages flower every day it sits on the shelf.	**Fully opaque steel. Zero light reaches the pre-roll — it stays fresh longer.**
BREAKAGE & LOSS	Bends, cracks and feels cheap the moment a customer picks it up.	Breaks — in transit, on the shelf, in a bag. You pay for the losses.	**Steel doesn't shatter. It ships, stacks and travels intact, end to end.**
LABEL ADHESION	Labels wrinkle and lift on flexible plastic walls.	Labels peel off smooth glass — a constant rework headache.	**The wrap bonds flat and firm on rigid metal. Your artwork stays put.**
★ POSITIONED WRAP	Hand-applied. Orientation is random, tube to tube.	Random. Your logo faces wherever it lands.	**We apply the wrap in register: the cap opening is aligned to the position you specify. Logo front and center — every tube, every run.**
CHILD RESISTANCE	CR caps flex and wear with repeated use.	Metal screw caps on glass are rarely child-resistant.	**A purpose-built child-resistant (CR) cap — custom molded for this tube.**
STATIC	Static cling sticks product to the tube walls.	No static — but one drop can end the tube.	**The metal body is naturally anti-static. The product slides out clean.**
SHELF PRESENCE	Commodity look. Cheap on the shelf, invisible next to premium brands.	Premium, but heavy and fragile — costly to ship and stock.	**Solid metal presence at a working weight. The tube customers pick up first.**
DISPLAY	Tapered tubes do not line up evenly.	Glass tubes line up neatly, but can break.	**Steel tubes lie flat and line up neatly for display and restocking, and resist breakage.**
REUSE	Single-use by design — thin walls deform and caps loosen after a few uses.	Reusable — until the day it drops.	**Built to be kept and refilled for years. A keeper, not a consumable.**

80 / 98 / 116 mm · Ø17 mm · Custom wrap from 1,000 tubes · 20M tubes / month · Blank tubes ship from LA in 48 hrs · Custom printed tubes in 15–17 days, DDP
